What Is Data Warehousing?

Data Warehousing is the process of collecting and organizing disparate sources of information for analysis.

Cogsley Services Inc.

Sales by **industry/sector**

Avg. **days to complete** by **manager**

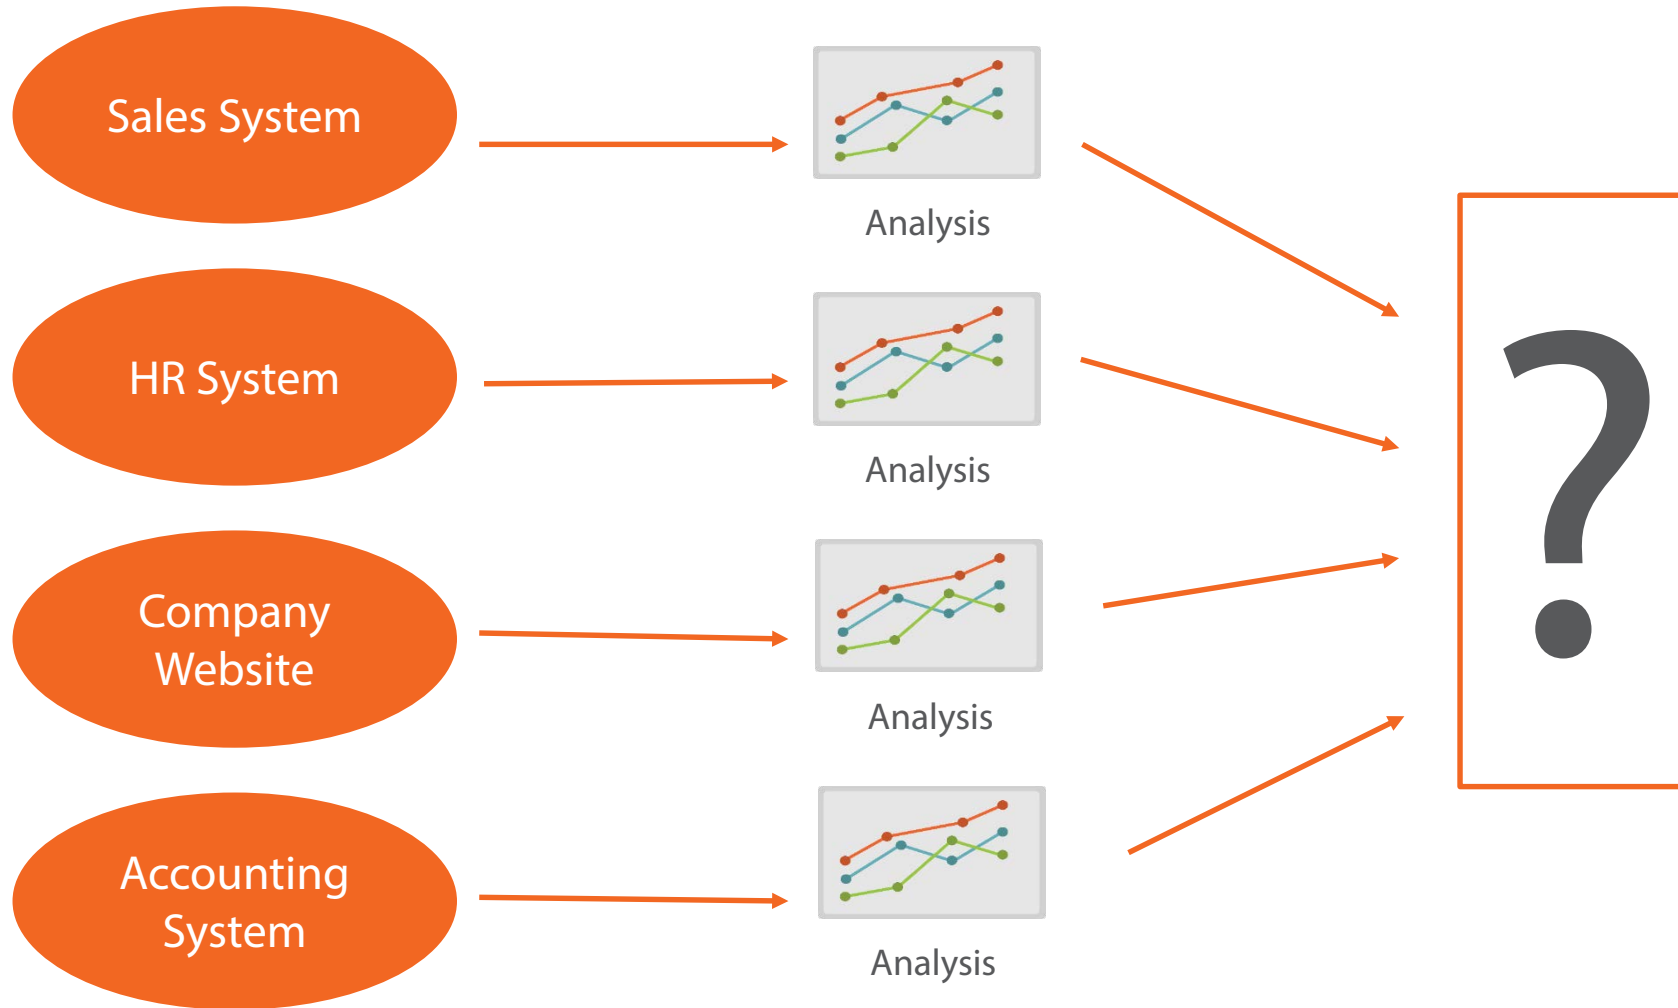

Hourly **wage** to **bill rate** ratio

Why Use Data Warehousing?

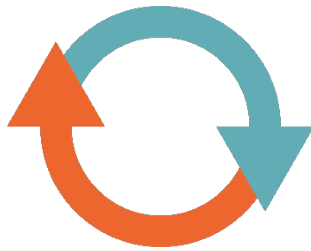

Data Warehousing opens up opportunities to gain value from your raw data through the process of analysis.

How Data Warehousing Works

By collecting data from multiple sources, organizing it into simple structures, analysts and programs can leverage it for better decision making.

Key Concept: Dimensional Modeling

Dimensional Modeling

Reduces complexity

Provides historical view

Enables analysts

Is re-usable

Dimensional Modeling

What: A data modeling technique focused on analysis or Business Intelligence

Why: It's a great way to enable analysts to be effective.

How: Using facts and dimension tables to create data marts

Facts and Dimensions

Facts/Measures

The subject of our analysis (eg. Sales Amount)

Dimensions

The context by which we analyze our facts

Key Concept: Star Schema

Star Schema / Data Mart

Business Intelligence
Simple yet sustainable
Flexible
